Chubb Pandemic Business Interruption Program

John Fielding
SVP and General Counsel,
Global Gov’t and Industry Affairs
Chubb’s Prospective Pandemic Risk Insurance Proposal

Why Chubb is engaged to find a solution:

• Business Interruption insurance – and some other lines of coverage – generally do not cover pandemic risk

• Widely accepted that pandemic risk is uninsurable so government must play large role, but role for insurers, too

• With carefully constructed federal government program, insurers can bear risk

• Industry skin in the game can provide mitigation and other benefits

• Chubb proposal intended to be a constructive framework to advance the debate

Issues to be Addressed:

• Does the plan require insurers to assume part of the risk? How much?

• Who is covered by the plan? Small? Medium/Large Businesses?

• Are insurers required to offer the coverage?

• Are business required to purchase the coverage?

• Is premium charged?

• Are there policy limits?

• What is the program limit?

• How is the program triggered?

• How are claims adjusted?

• How are reinsurance and excess coverage addressed?
Chubb Pandemic Business Interruption Program

Key Attributes for a Successful Program:

1. A meaningful role for the insurance industry to share pandemic risk with the government
2. A structure that meets the different needs of small, medium, and large businesses
3. Affordability for small businesses, with strong incentives to purchase BI coverage while maintaining choice
4. Effective incentives for broad participation by the insurance industry
5. Fiscally responsible
The purpose of this Program is to assist businesses and mitigate economic disruption during future pandemics through a private-public partnership that combines:

- The ability of the insurance industry to assess and absorb risk onto its balance sheet, while also using its administrative infrastructure (policy issuance, premiums & claims).
- The backing of the Government (and subsidization of premium) since the magnitude of potential loss makes pandemic broadly uninsurable.

Part I - Small Business – BIP (Business Expense Insurance Program)

- Provides immediate infusion of cash based on pre-set multiples of payroll at time of policy purchase, paid promptly upon declaration of pandemic. Simple, parametric structure eliminates complexity of adjusting individual claims.
- Businesses know in advance they have cash to cover payroll and other expenses to maintain businesses in event of shut-down. Purchase is mandatory with a strong opt-out; those that do not are not eligible for Program benefits.
- The total Program Capacity floats (set each year by Government) but is estimated at $750B. The industry share in Year 1 is maximum of $15B, rising to $30B over the Program. The timing risk for industry on Government payments is eliminated by pari passu reinsurance structure and LoC facility.
- The Government role is to provide funding capacity, creating affordability and broad participation.

Part II - Medium and Large Business – Pan Re

- Creates a market-oriented program for indemnity-based business interruption insurance, triggered by pandemic, under which the insurance industry and the Government are paid a proper risk adjusted price.
- Participation by businesses and insurers is voluntary. Participating insurers retain a portion of each risk and reinsure the rest to Pandemic Re, a Government owned reinsurance entity.
- The total Program Capacity is $400B of aggregate limit. The industry share in Year 1 is maximum of $15B, rising to $30B over the Program.
- The Government role is provide funding capacity to stimulate the development of a market for pandemic coverage.
